

**CADMD 2023**

## **Conference Proceedings**

**of the XXXI International Conference**

**“CAD in Machinery Design. Implementation and Educational  
Issues”**

**Conference in memory of Professor Jerzy Wróbel**

**Department of Computer Aided Systems**

Lviv Polytechnic National University

Wydział Mechaniczny  
Politechnika Białostocka

**Faculty of Mechanical Engineering**

Bialystok University of Technology

**Faculty of Mechanical Engineering and Robotics**

AGH University of Science and Technology

**Institute of Machine Design Fundamentals**

Warsaw University of Technology

**Supraśl, 2023**

## PATRONAGE:

**Rector of Białystok University of Technology**

**Rector of L'viv Polytechnic National University**

**Rector of AGH University of Science  
and Technology**

**Rector of Warsaw University of Technology**

**Main Board of SIMP  
(Polish Society of Mechanical Engineers and  
Technicians)**

**President of ProCAX Association**

**ORGANIZED BY:**

**FACULTY OF MECHANICAL ENGINEERING  
BIALYSTOK UNIVERSITY OF TECHNOLOGY**

**DEPARTMENT OF COMPUTER  
AIDED DESIGN SYSTEMS,  
L'VIV POLYTECHNIC NATIONAL UNIVERSITY**

**FACULTY OF MECHANICAL ENGINEERING  
AND ROBOTICS,  
AGH UNIVERSITY OF SCIENCE AND TECHNOLOGY**

**INSTITUTE OF MACHINE DESIGN FUNDAMENTALS,  
WARSAW UNIVERSITY OF TECHNOLOGY**

## **Proceedings**

The conference materials are presented on problems in the field of MCAD and ECAD techniques and CAX tools in automation of machine and mechanism design), identification, modelling of processes and systems, UAV, UGV, robotics, automation, electromechanical systems, application of information technologies in engineering, software, programming and algorithms, additive technologies, reverse engineering, databases, CAX engineering education, educational methods and Internet technologies in education.

## **ORGANIZING COMMITTEE**

**PROF. ROMAN KACZYŃSKI (CHAIRMAN)**

BIAŁYSTOK UNIVERSITY OF TECHNOLOGY, POLAND

**DR HAB. GRZEGORZ MIECZKOWSKI (CO-CHAIRMAN)**

BIAŁYSTOK UNIVERSITY OF TECHNOLOGY, POLAND

**DR ANDRZEJ ŁUKASZEWICZ (SECRETARY)**

BIAŁYSTOK UNIVERSITY OF TECHNOLOGY, POLAND

**DR ANDRIY ZDOBYTSKYI (SECRETARY)**

LVIV POLYTECHNIC NATIONAL UNIVERSITY, UKRAINE

**DR PIOTR TARASIUK**

BIAŁYSTOK UNIVERSITY OF TECHNOLOGY, POLAND

### ABSTRACT

The master model of fire detector enclosure components was designed and produced using CAX. The 3D model of the fire detector enclosure components was developed and improved by adding fasteners for the Ardoinomini board, simulation modeling was carried out, and the lower cover of the fire detector was produce using the 3D printer. This will allow in the future to carry out full-scale experiments of the fire detector and system.

KEYWORDS: heat detector, computer added design, microcontroller, 3D-model, 3-D print.

### I. INTRODUCTION

The creation of new parts of a technical device using CAX is a promising direction of designing, improving and manufacturing devices [1]. Such devices include fire detectors (FD), which are part of the fire detection system (FDS) [2]. Generally FD consist of enclosure

components\_ and theelectronic control board [3]. The speed and efficiency ofignition detection using the FDS depends on various factors:the type of fire, the location of the FD, the FD selected type,the FDS operation algorithm, etc. Improving the efficiency ofthe fire detection system is possible by improving thealgorithm of the hardware part of the fire detection systemand implementing it on the Ardoinomini board. For this, it is necessary to improve the FD enclosure components design forthe possibility of attaching the Ardoinomini board [3].

The improvement process involves the development of a 3D model of the FD enclosure components, simulation modeling and the master model production for further full-scale experiments of both the FD enclosure components and the FDS.

### II. MAIN RESULTS AND THEIR DISCUSSIONS

This article presents a 3D model of the FD enclosure components (fig. 1). Also carried out simulation of the temperature effect on the FD enclosure components, and based on it, a corresponding master model (fig. 2) containing a new fastening element for the Ardoinomini microprocessor

Fig. 1. The 3D model of the FD enclosure components was developed

Ardoinomini was used to implement a new hardware controller with fuzzy logic control algorithm [2].

Fig. 2. The master model of the lower cover with new fastening elements is made

The Ender 3 Max printer was used for 3D printing of the master model to obtain an improved design of the lower cover of the PS (fig. 2).

### III. CONCLUTIONS

As a result of the computer aided automated design, a 3D model of the FD enclosure components was developed, the design of the lower cover of the FD was improved due to the fastening elements for the Ardoinomini board, and a corresponding master model was made. Simulation modeling was carried out as the initial stage of the tests. The implementation of the innovation intelligent algorithms for hardware control the part of the FD will improve the efficiency of the FDS control system.
